The automotive industry appears close to substantial change engendered by “self-driving” technologies. This technology offers the possibility of significant benefits to social welfare—saving lives; reducing crashes, congestion, fuel consumption, and pollution; increasing mobility for the disabled; and ultimately improving land use. This report is intended as a guide for state and federal policymakers on the many issues that this technology raises.

Fresh on the heels of the best-selling book *Lost Drag Strips* comes a new look at

other long-lost and forgotten drag racing facilities from the 1950s, 1960s, and 1970s. In the first volume, the author examined the birth of drag racing and its subsequent popularity that invaded every city and community across America. Unfortunately, after the initial explosion of popularity, it waned, and various drag strips closed for a myriad of reasons. Financial pressure for the real estate they occupied, suburban sprawl, and waning participation were all reasons for the change in fortunes for the small, and even not-so-small, racetracks. The first volume was great, but readers demanded more! Lost Drag Strips II picks up where the first volume left off, covering even more tracks with archival photos of racing in the tracks' heyday, the cars that ran there, and coverage of the tracks as they exist today. This volume also includes some of the tracks that survived, those that fought off the economic demons and the urban sprawl and continue to run today. Tracks in this volume include: Fort Wainwright/Racing Lions Motorsports Park, Avenue G Drag Strip, Fremont/Baylands Drag Strip, San Fernando Drag Strip, Fontana Drag City, Inyokern Drag Strip, Kahuku Air Strip, Las Vegas Speedrome, Continental Divide Raceways, SRCA Drag Strip, Southwest Raceway, Willow Run Raceway, Minnesota Dragways, KCTA Drag Strip, Detroit Dragway, Niagara Airport Dragstrip, New York National Speedway, York US 30 Drag-O-Way, South Mountain Raceway, La Place Dragway, Yellow

River Drag Strip, Thunderbolt Dragway, and more.

To heal addiction, you have to go back to the start... Featured on Russell Brand's podcast Under the Skin Dr Gabor Maté is one of the world's most revered thinkers on the psychology of addiction. His radical findings – based on decades of work with patients challenged by catastrophic drug addiction and mental illness – are reframing how we view all human development. In this award-winning modern classic, Gabor Maté takes a holistic and compassionate approach to addiction, whether to alcohol, drugs, sex, money or anything self-destructive. He presents it not as a discrete phenomenon confined to a weak-willed few, but as a continuum that runs through (and even underpins) our society; not as a medical 'condition', but rather the result of a complex interplay of personal history, emotional development and brain chemistry. Distilling cutting-edge research from around the world, In the Realm of Hungry Ghosts avoids glib self-help remedies, instead promoting self-understanding as the first key to

healing and wellness. Blending personal stories and science with positive solutions, and written in spellbinding prose, it is a must-read that will change how you see yourself, others and the world. 10th anniversary edition, updated with new chapter on the Opiod crisis

Enthusiasts have embraced the GM Turbo 400 automatics for years, and the popularity of these transmissions is not slowing down. Ruggles walks through the step-by-step rebuild and performance upgrade procedures in a series of full-color photos.

The Anarchist Cookbook will shock, it will disturb, it will provoke. It places in historical perspective an era when "Turn on, Burn down, Blow up" are revolutionary slogans of the day. Says the author "This book... is not written for the members of fringe political groups, such as the Weatherman, or The Minutemen. Those radical groups don't need this book. They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There i detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. There is a comprehensive chapter on

natural, non-lethal, and lethal weapons, running the gamut from cattle prods to sub-machine guns to bows and arrows.

His wife, Norma, has run off with her ex-husband, taking Ray's cards, shotgun and car. But from the receipts, Ray can track where they've gone. He takes off after them, as does an irritatingly tenacious bail bondsman, both following the romantic couple's spending as far as Mexico. There Ray meets Dr Reo Symes, the seemingly down-on-his-luck and rather eccentric owner of a beaten up and broken down bus, who needs a ride to Belize. The further they drive, in a car held together by coat-hangers and excesses of oil, the wilder their journey gets. But they're not going to give up easily.

This book presents WHO guidelines for the protection of public health from risks due to

a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching

and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

Honest Weight is the 20th century story of Toledo Scale, beginning with their fight in the first decade for weights and measures laws to outlaw dishonest scales. In narrative form, it tells the living history of the company, beginning with the founder after he was dramatically fired by National Cash Register Company. Henry Theobald then started a scale and cash register company to compete with his old boss, the legendary John Patterson of NCR. It's the story of the inventors, leaders, craftsmen and technical breakthroughs, beginning in the first year of the 20th century up to current times. Included is the story of the innovative sales techniques developed by Theobald that led to tight-fisted merchants being willing to spend four and five times as much for a Toledo "No Springs—Honest Weight" scale than for the scale it replaced. This led to Toledo becoming the best known scale brand in the nation. It includes the story of how a plastic came to be developed for Toledo Scale under the leadership of the company's

second president Hubert Bennett that led him to establish a separate, wholly owned company. This company, Plaskon, became the largest plastic company in the United States for a brief time. It tells of Toledo Scale's World War II contributions in which the company played a top-secret part in the production of the Norden bombsight and the atomic bomb. The story includes quotations from both retired company executives and current employees. It includes information obtained from an unpublished factual manuscript covering the company's first 50 years, other company archives and the Toledo Blade. A dozen historical photos are displayed, which include the first DeVilbiss computing scale, a Toledo Cash Register, and a Phinney scale which was the first patented computing scale. A few Phinney scales were manufactured in 1870. Since Toledo Scale couldn't locate one to prove they were actually manufactured, they lost a huge lawsuit to Dayton Scale that almost broke the company. Also shown is a photo of Norman Bel Geddes' 1929-30 radical designs of a new factory and plant campus for Toledo Scale, never built due to the depression. The story includes the transition to electronic scales begun by the company's third president Harris McIntosh. This transition was completed in the final quarter of the century. And finally, the human story that resulted from the evolution of several different ownership's is told, until just a few years ago, Toledo Scale disappeared as a separate brand and was merged into Mettler-Toledo, Inc.

In 1988, IARC classified diesel exhaust as probably carcinogenic to humans (Group

2A). An Advisory Group which reviews and recommends future priorities for the IARC Monographs Program had recommended diesel exhaust as a high priority for re-evaluation since 1998. There has been mounting concern about the cancer-causing potential of diesel exhaust, particularly based on findings in epidemiological studies of workers exposed in various settings. This was re-emphasized by the publication in March 2012 of the results of a large US National Cancer Institute/National Institute for Occupational Safety and Health study of occupational exposure to such emissions in underground miners, which showed an increased risk of death from lung cancer in exposed workers. The scientific evidence was reviewed thoroughly by the Working Group and overall it was concluded that there was sufficient evidence in humans for the carcinogenicity of diesel exhaust. The Working Group found that diesel exhaust is a cause of lung cancer (sufficient evidence) and also noted a positive association (limited evidence) with an increased risk of bladder cancer (Group 1). The Working Group concluded that gasoline exhaust was possibly carcinogenic to humans (Group 2B), a finding unchanged from the previous evaluation in 1989.

First trialled in Europe in the spring of 1945, but formally introduced into British Army service in December 1946, not only is the Centurion one of the most important tanks in the history of the British armoured fighting vehicle (AFV), but it is also one of the most significant post-war Western tanks. Between 1946 and 1962, 4,423 Centurions were built in 13 basic marks and numerous variants, with the chassis also adapted for several other AFV roles. A small number of the Beach Armoured Recovery Version (BARV) served with the British forces during the Iraq War of 2003, some 58 years after the Centurion first entered service! The Centurion has seen extensive combat in the Korean War (Britain), Vietnam (Australia), the Middle East (Israel) in the 1967 Six Day War, 1973 Yom Kippur War, and during the 1978 and 1982 invasions of Lebanon, and in the Indo-Pakistan War (India) in 1965 where it fought against US-supplied M47 and M48 Patton tanks.

Regenerative medicine is broadly defined as the repair or replacement of damaged cells, tissues and organs. It is a multidisciplinary effort in which technologies derive from the fields of cell, developmental and molecular biology; chemical and material sciences (i.e. nanotechnology); engineering; surgery; transplantation; immunology; molecular genetics; physiology; and pharmacology. As regenerative medicine technologies continue to evolve and expand across the boundaries of numerous scientific disciplines, they remain at the forefront of the translational research frontier with the potential to radically alter the treatment of a wide variety of disease and dysfunction. This book will draw attention to the critical role that pharmacological sciences will undeniably play in the advancement of these treatments. This book is

invaluable for advanced students, postdoctoral fellows, researchers new to the field of regenerative medicine/tissue engineering, and experienced investigators looking for new research avenues. The first state-of-the-art book in this rapidly evolving field of research.

Protecting and maintaining water distributions systems is crucial to ensuring high quality drinking water. Distribution systems -- consisting of pipes, pumps, valves, storage tanks, reservoirs, meters, fittings, and other hydraulic appurtenances -- carry drinking water from a centralized treatment plant or well supplies to consumers's taps. Spanning almost 1 million miles in the United States, distribution systems represent the vast majority of physical infrastructure for water supplies, and thus constitute the primary management challenge from both an operational and public health standpoint. Recent data on waterborne disease outbreaks suggest that distribution systems remain a source of contamination that has yet to be fully addressed. This report evaluates approaches for risk characterization and recent data, and it identifies a variety of strategies that could be considered to reduce the risks posed by water-quality deteriorating events in distribution systems. Particular attention is given to backflow events via cross connections, the potential for contamination of the distribution system during construction and repair activities, maintenance of storage facilities, and the role of premise plumbing in public health risk. The report also identifies advances in detection, monitoring and modeling, analytical methods, and

research and development opportunities that will enable the water supply industry to further reduce risks associated with drinking water distribution systems.
