Cardiovascular/Pulmonary Essentials: Applying the Preferred Physical Therapist Practice Patterns(SM) answers the call to what today's physical therapy students and clinicians are looking for when integrating the Guide to Physical Therapist Practice as it relates to the cardiopulmonary system in clinical care. As a part of Essentials in Physical Therapy led by Series Editor Dr. Marilyn Moffat, Cardiovascular/Pulmonary Essentials: Applying the Preferred Physical Therapist Practice Pattern(SM) is edited by Dr. Donna Frownfelter in a user-friendly format that not only brings together the conceptual frameworks of the Guide language, but also parallels the patterns of the Guide. In each case, where appropriate, a brief review of the pertinent anatomy, physiology, pathology, pharmacology, and imaging is provided. Each pattern then details two to three diversified case studies coinciding with the Guide format. The physical therapist examination, including history, systems review, and specific tests and measures for each case, as well as evaluation, diagnosis, prognosis, plan of care, and evidence-based interventions are also addressed. the others will be updated to keep up-to-date with the guidelines and current practice. Cardiac rehabilitation is of key importance to ameliorate long-term morbidity and mortality resulting from cardiac diseases and events. However, much of the current literature is dense, unwelcoming and academic in style and format. For those physicians understanding the scope of cardiac rehabilitation there is a need to distill the guidelines and various management options available to them into a concise practical manual. Up until now, all references have looked at the general options, but there is definite need to investigate the practicalities of individual patient groups.

Building on the groundbreaking work *Lifestyle Medicine* (2016), this unique new book bridges the gap between theory and practice by providing detailed information on the real-world development and creation of a Lifestyle Medicine Center, whether independently or as part of an established medical program or department. Part one sets the stage by establishing the rationale for creating a Lifestyle Medicine Center as well as the medical and economic burden it seeks to alleviate. The construction of the physical facility and all of the myriad details of the program and its key players are covered in part two, from the structural to the aesthetic, including informatics, developing patient resources and education tools, current technologies and applications, the role of the dietitian and exercise physiologist, inpatient consultation, the importance of community engagement, and more. Part three is comprised of case studies of existing, successful Lifestyle Medicine Centers across the country, with detailed descriptions of their history, development, programs and challenges. Chapters are supported with plentiful figures, tables and useful links. The burden of chronic disease in the U.S. and globally is growing, with pervasive direct and indirect multi-scale adverse effects on health and well-being, economics, and quality of life. Notwithstanding the remarkable progress in biomedical technology, the role of lifestyle medicine in managing chronic disease in a preventive care model is paramount; however, the relevant and effective education in lifestyle medicine is lacking. Translating the theory into action steps, instantiated by case studies with critical interpretations and problem-solving tools, *Creating a Lifestyle Medicine Center* is the go-to resource for family and primary care physicians, internal medicine physicians, and all clinical specialties interested in planning and developing a lifestyle medicine program.

This book gathers together contributions from internationally renowned authors in the field of cardiovascular systems and provides crucial insight into the importance of sex- and gender-concepts during the analysis of patient data.
