World-leading anthropologists and philosophers pursue the perplexing question fundamental to both disciplines: What is it to think of ourselves as human? A common theme is the open-ended and context-dependent nature of our notion of the human, one upshot of which is that perplexities over that notion can only be dealt with in a piecemeal fashion, and in relation to concrete real-life circumstances. Philosophical anthropology, understood as the exploration of such perplexities, will thus be both recognizably philosophical in character and inextricably bound up with anthropological fieldwork. The volume is put together accordingly: Precisely by mixing ostensibly philosophical papers with papers that engage in close anthropological study of concrete issues, it is meant to reflect the vital tie between these two aspects of the overall philosophical-anthropological enterprise. The collection will be of great interest to

comprised of both users and nonusers of the previous edition. The charge of this committee was to ensure that all changes did not alter those aspects of the text that attracted users of the eleventh edition and at the same time provide freshness to the new edition that would attract new users. New to this Edition More than 25% of the exercises are either new or revised from the eleventh edition. New applied exercises have been added to the book and some existing applied exercises have been updated. Some prose in the text has been tightened to enhance clarity and student understanding"--
