This book gathers contributions from scientists and industry representatives on achieving a sustainable bioeconomy. It also covers the social sciences, economics, business, education and the environmental sciences. There is an urgent need to optimise and maximise the use of biological resources, so that primary production and processing systems can generate more food, fibre and other bio-based products with less environmental impacts and lower greenhouse gas emissions. In other words, we need a “sustainable bioeconomy” – a term that encompasses the sustainable production of renewable resources from land, fisheries and aquaculture environments and their conversion into food, feed, fibre bio-based products and bio-energy, as well as related public goods. Despite the relevance of achieving a sustainable bioeconomy, there are very few publications in this field. Addressing that gap, this book illustrates how biological resources and ecosystems could be used in a more sustainable, efficient and integrated manner – in other words, how the principles of sustainable bioeconomy can be implemented in practice. Given its interdisciplinary nature, the field of sustainable bioeconomy offers a unique opportunity to address complex and interconnected challenges, while also promoting economic growth. It helps countries and societies to make a transition and to use resources more efficiently, and shows how to rely less on biological resources to satisfy industry demands and consumer needs. The papers are innovative, cross-cutting and include many practice-based lessons learned, some of which are reproducible elsewhere. In closing, the book, prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), reiterates the need to promote a sustainable bioeconomy today.

This book on Thesis Writing for Master's and Ph.D. program focuses on the difficulties students encounter with regard to choosing a guide; selecting an appropriate research title considering the available resources; conducting research; and ways to overcome the hardships they face while researching, writing and preparing their dissertation for submission. Thesis writing is an essential skill that medical and other postgraduates are expected to learn during their academic career as a mandatory partial requirement in order to receive the Master's degree. However, at the majority of medical schools, writing a thesis is largely based on self-learning, which adds to the burden on students due to the tremendous amount of time spent learning the writing skills in addition to their exhausting clinical and academic work. Due to the difficulties faced during the early grooming years and lack of adequate guidance, acquiring writing skills continues to be a daunting task for most students. This book addresses these difficulties and deficiencies and provides comprehensive guidance, from selecting the research title to publishing in a scientific journal.

An effective state is essential to achieving socio-economic and sustainable development. With the advent of globalization, there are growing pressures on governments and organizations around the world to be more responsive to the demands of internal and external stakeholders for good governance, accountability and transparency, greater development effectiveness, and delivery of tangible results. Governments, parliaments, citizens, the private sector, NGOs, civil society, international organizations and donors are among the stakeholders interested in better performance. As demands for greater accountability and real results have increased, there is an attendant need for enhanced results-based monitoring and evaluation of policies, programs, and projects. This Handbook provides a comprehensive ten-step

model that will help guide development practitioners through the process of designing and building a results-based monitoring and evaluation system. These steps begin with a OC Readiness AssessmentOCO and take the practitioner through the design, management, and importantly, the sustainability of such systems. The Handbook describes each step in detail, the tasks needed to complete each one, and the tools available to help along the way."

Why is there currently such strong academic and popular interest in 'the body' in contemporary societies? What factors shape our conceptions of the body, its naturalness, health and normality? What is the mind-body dualism and why should it matter? This book examines these and other body questions from a critical socio-cultural perspective. In particular, it shows how conceptions of the body are affected by processes of individualization, medicalization and commodification. Chapters discuss the impact of new biomedical technologies on the notion of the natural body, efforts to reshape and perfect the body, the role of the media in 'framing' body issues, processes of body classification, the impact of consumerism on concepts of health, healing and self-care, and the implications of theoretical and practical efforts to 'integrate' mind and body. This book will be an invaluable source for those seeking to understand the social, cultural and political significance of 'the body' in contemporary society.

Three years before the September 11 bombing of the World Trade Center-a Chinese military manual called Unrestricted Warfare touted such an attack-suggesting it would be difficult for the U.S. military to cope with. The events of September 11 were not a random act perpetrated by independent agents. The doctrine of total war outlined in Unrestricted Warfare clearly demonstrates that the People's Republic of China is preparing to confront the United States and our allies by conducting "asymmetrical" or multidimensional attack on almost every aspect of our social, economic and political life. This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

of one of the twentieth century's most important artists William Feaver, Lucian Freud's collaborator, curator and close friend, knew the unknowable artist better than most. Over many years, Freud narrated to him the story of his life, 'our novel'. Fame follows Freud at the height of his powers, painting the most iconic works of his career in a constant and dissatisfied pursuit of perfection, just outrunning his gambling debts and tailor's bills. Whether tattooing swallows at the base of Kate Moss's back or exacting a strange and horrible revenge on Jerry Hall and Mick Jagger, Freud's adventures were always perfectly characteristic. An enfant terrible till the end, even as he was commissioned to paint the Queen and attended his own retrospectives, what emerges is an artist wilfully oblivious to the glitter of the world around o and focussed instead on painting first and last. Biogenic amines have been known for some time. These compounds are found in varying concentrations in a wide range of foods (fish, cheese, meat, wine, beer, vegetables, etc.) and their formations are influenced by different factors associated to those foods (composition, additives, ingredients, storage, microorganism, packaging, handing, conservation, etc.). The intake of foods containing high concentrations of biogenic amines can present a health hazard. Additionally, they have been used to establish indexes in various foods in order to signal the

degree of freshness and/or deterioration of food. Nowadays, there has been an increase in the number of food poisoning episodes in consumers associated with the presence of these biogenic amines, mainly associated with histamines. Food safety is one of the main concerns of the consumer and safety agencies of different countries (EFSA, FDA, FSCJ, etc.), which have, as one of their main objectives, to control these biogenic amines, principally histamine, to assure a high level of food safety. Therefore, it is necessary to deepen our understanding of the formation, monitoring and reduction of biogenic amines during the development, processing and storage of food, even the effect of biogenic amines in consumers after digestion of foods with different levels of these compounds. With this aim, we are preparing a Special Issue on the topic of "Biogenic Amines in Food Safety", and we invite researchers to contribute original and unpublished research articles and reviews articles that involve studies of biogenic amines in food, which can provide an update to our knowledge of these compounds and their impacts on food quality and food safety.

THE INTERNATIONAL BESTSELLER A SUNDAY TIMES, THE TIMES, ECONOMIST, DAILY TELEGRAPH, EVENING STANDARD, OBSERVER BOOK OF THE YEAR 'Undoubtedly the best single-volume life of Churchill ever written' Dominic Sandbrook, Sunday Times A magnificently fresh and unexpected biography of Churchill, by one of Britain's most acclaimed historians Winston Churchill towers over every other figure in twentieth-century British history. By the time of his death at the age of 90 in 1965, many thought him to be the greatest man in the world. There have been over a thousand previous biographies of Churchill. Andrew Roberts now draws on over forty new sources, including the private diaries of King George VI, used in no previous Churchill biography to depict him more intimately and persuasively than any of its predecessors. The book in no way conceals Churchill's faults and it allows the reader to appreciate his virtues and character in full: his titanic capacity for work (and drink), his ability see the big picture, his willingness to take risks and insistence on being where the action was, his good humour even in the most desperate circumstances, the breadth and strength of his friendships and his extraordinary propensity to burst into tears at unexpected moments. Above all, it shows us the wellsprings of his personality - his lifelong desire to please his father (even long after his father's death) but aristocratic disdain for the opinions of almost everyone else, his love of the British Empire, his sense of history and its connection to the present. During the Second World War, Churchill summoned a particular scientist to see him several times for technical advice. 'It was the same whenever we met', wrote the young man, 'I had a feeling of being recharged by a source of living power.' Harry Hopkins, President Roosevelt's emissary, wrote 'Wherever he was, there was a battlefield.' Field Marshal Sir Alan Brooke, Churchill's essential partner in strategy and most severe critic in private, wrote in his diary, 'I thank God I was given such an opportunity of working alongside such a man, and of having my eyes opened to the fact that occasionally supermen exist on this earth.'
