is free to download and use by anyone for anything. The Complete Guide to Blender Graphics: Modeling and Animation, 5th Edition is a unified manual describing the operation of Blender version 2.80 with its New Improved Interface, New Workspaces and New Eevee Render System. This book introduces the program's Graphical User Interface and shows how to implement tools for modeling and animating characters and creating scenes with the application of color, texture and special lighting effects. Key Features: The book is designed to lead new users into the world of computer graphics using Blender 2.80 and to be a reference for established Blender artists. The book presents instruction in a series of short chapters with visual references and practical examples. Instructions are structured in a building-block fashion using contents in earlier chapters to explain more complex operations in later chapters.

Blender 2.8 parametric modeling With parametric controls in 3D objects, you will find properties that have a relation to the purpose of an object. For instance, a staircase would have properties to control step count, width, and height. By updating any of those properties would mean a direct change to the 3D model. Those are parametric controls that will help you reuse 3D models in several projects with a simple update on properties. In Blender 2.8, you won't find any parametric controls for 3D models as a default option. You will have to add those controls using a particular group of tools. To add those controls to 3D objects in Blender, we will use Hooks, Shape Keys, Drivers, and Custom Properties. If you want to learn how to use those tools in projects related to 3D modeling, you will find lots of examples and explanations in the book about them. You will create objects like a parametric chair and a staircase.

- Understand what are parametric controls
- Prepare a model to receive parametric controls
- Add Hooks to parts of a model for deformation controls
- Use

Shape Keys to create different "snapshots" of a 3D model- Create Drivers to connect properties of objects- Add Custom Properties to objects- Connect Custom Properties to Drivers- Use math expressions to control object property- Create conditional transformations with ternary operators- Make a library of reusable parametric objects- Transfer models between projects You will learn how to add parametrical controls and properties to objects in Blender 2.8. Among the examples described in the book, you will learn how to create a parametric chair and also a staircase.

With Blender 2.9, you have a powerful and flexible environment to help you develop architectural designs. Annotation Blender 3D is a popular, open source modeling and animation package. It is used for game design, architectural visualization, character design, animation, and still images. However, creating believable lighting and texturing is difficult in any 3D program. This step-by-step tutorial aims to familiarize you with Blender's new interface and basic features as well as take a look at what it takes to produce a believable scene using lighting, texturing, compositing, and rendering. By using the example of a tricycle in an outdoor scene you will learn to establish an effective workflow to increase your productivity. You will also thoroughly studying the scene and deciding how your tricycle would look on a sunny, cloudless day using Blender lamps. Not just that, you will also learn to implement your

decisions by applying a 3-point light rig, adjusting the color of the lights, adding shadows, and using light groups to control the lighting. You will learn to add ambient occlusion effects to your scene by using both ray-traced and approximated ambient occlusion algorithms. A mesh example shows you how to give a particular look or "feel" by adding and editing materials. You will light a wine bottle on a table by taking a look at lighting interior spaces and how to create complex light rigs and custom UV textures for your scenes using Blender's UV editing capabilities. You will create a custom UV map, export it as a file type Blender can read, and finally add your UV map to the wine bottle mesh. In the same example you will add wood material to booths. You will further enhance the background by adding wallpaper, giving color and metallic tint to the lamps, and adding material to light bulbs. You will look at lighting techniques used in scenes that include both interior and exterior light sources in a scene that has sunlight traveling in through the window and a light bulb hanging from the ceiling. A step-by-step guide, with practical examples, that builds up your knowledge of lighting and rendering in Blender and helps you to implement these various techniques in your own work

What you will learn from this book :

- Optimize Blender's Internal Renderer for your projects

Apply both ray-traced and approximated ambient occlusion to your scene Configure the default settings of ambient occlusion by manipulating parameters such as Sampling, Attenuation, and Influence Configure settings found with Blender's materials to create, duplicate, and add special effects such as transparency and reflections to your materials Modify World settings to add a gradient effect to the background to create a more interesting render Separate your scene into layers to light the scene using a complex light rig Construct a complex light rig and link lights to specific layers Add indirect lighting and integrate it with your scene Add textures to materials Enhance your scene by using Blender's node compositor Simulate light "bending" with 3D lighting techniques Illuminate dark corners and crevices in your scene using ambient light Set up the basic material and then add textures and look at many different materials with varying properties such as plastic, metal, glass, wood, brick, marble, and concrete Approach Each chapter develops a different aspect of a Blender technique. The book is essentially a step-by-step tutorial, which builds up your knowledge throughout. It has practical examples such as lighting a tricycle in open space, lighting a wine bottle on a table, and lighting a room that has a lamp as well as sunlight coming in through the window.
