Whether students pursue a professional career in accounting or in other areas of management, they will interact with accounting systems. In all organizations, managers rely on management accounting systems to provide information to deal with changes in their operating environment. This book provides students and managers with an understanding and appreciation of the strengths and limitations of an organization's accounting system, and enables them to be intelligent and critical users of the system. The text highlights the role of management accounting as an integral part of the organization's strategy and not merely a set of individual concepts and computations. An analytical framework for organizational change is used throughout the book to underscore how organizations must adapt to create customer and organizational value. This framework provides a way to examine and analyze the organization's accounting system, and as a basis for evaluating proposed changes to the system. With international examples that bring the current business

Design of Industrial Information Systems presents a body of knowledge applicable to many aspects of industrial and manufacturing systems. New software systems, such as Enterprise Resource Planning, and new hardware technologies, such as RFID, have made it possible to integrate what were separate IT databases and operations into one system to realize the greatest possible operational efficiencies. This text provides a background in, and an introduction to, the relevant information technologies and shows how they are used to model and implement integrated IT systems. With the growth of courses in information technology offered in industrial engineering and engineering management programs, the authors have written this book to show how such computer-based knowledge systems are designed and used in modern manufacturing and industrial companies. Introduces Data Modeling and Functional Architecture Design, with a focus on integration for overall system design Encompasses hands-on approach, employing many in-chapter exercises and end-of-chapter problem sets with case studies in manufacturing and service industries Shows the reader how Information Systems can be integrated into a wider E-business/Web-Enabled Database business

Although there are numerous books on alternative accounting methods, such as Lean accounting, none focus on the impact of time and how accounting practices can be modified to acknowledge the power of time. This book addresses this need. The Monetary Value of Time: Why Traditional Accounting Systems Make Customers Wait presents a

framework for assessing the value of time in terms of organizational strategy and competitive advantage. The framework presented will enable organizations to develop consistent measures and ensure that their cost accounting system isn't motivating behaviors that add to lead time and make customers wait. The framework outlined in this book is relevant to the managerial and cost accounting practices in today's manufacturing environment, which is increasingly moving away from mass production to custom manufacturing. The framework is supported by high-level metrics, which are reinforced by operational metrics. This is supported by accounting data that recognize the value of time. Pricing models that incorporate the concept of time are presented. The book provides many examples of how the use of standard costing and traditional accounting practices in a high-mix/low-volume production environment can produce contradictory or even inaccurate results that form the basis for poor decisions that may actually move your organization farther from its objectives. The book arms readers with options for overcoming traditional barriers by applying direct costs at an item level, while applying overheads at a macro or value stream level. For example, while GAAP requires overhead application for inventory valuation, a common misconception is that overhead must be applied at an item level. In fact, overhead can be absorbed by one journal entry.

Demonstrating the linkages between time-based accounting data and meaningful business metrics that drive bottom line results, the book presents methods and metrics that have been successfully applied by the author in manufacturing environments.

This book constitutes the thoroughly refereed post-conference proceedings of the 11th IFIP WG 6.11 Conference on e-Business, e-Services and e-Society, I3E 2011, held in Kaunas, Lithuania, in October 2011.
