Newton's heretical yet equation-incisive writings on theology, spirituality, alchemy, and prophecy, written in secret alongside his Principia Mathematica • Shows how Newton's brilliance extended far beyond math and science into alchemy, spirituality, prophecy, and the search for lost continents such as Atlantis • Explains how he was seeking to rediscover the one true religion that existed prior to the Flood of Noah, when science and spirituality were one • Examines Newton's alternate timeline of prehistory and his study of prophecy through the Book of Revelations, including his prediction of Apocalypse in the year 2060

Isaac Newton (1643-1727) is still regarded by the world as the greatest scientist who ever lived. He invented calculus, discovered the binomial theorem, explained the rainbow, built the first reflecting telescope, and explained the force of gravity. In his famous masterpiece, Principia Mathematica, he described the mechanics of the physical universe with unimagined precision, proving the cosmos was put together according to laws. The perfection of these laws implied a perfect legislator. To Newton, they were proof that God existed. At the same time Newton was writing Principia Mathematica, he was writing a twin volume that he might have called, had it been completed, Principia Theologia--Principles of Theology. This other masterpiece of Newton, kept secret because of the heresies it contained, consists of thousands of essays providing equation-incisive answers to the spiritual questions that have plagued mankind through the ages.

Examining Newton's secret writings, John Chambers shows how his brilliance extended into alchemy, spirituality, the search for lost continents such as Atlantis, and a quest to uncover the "corrupted texts" that were rife in the Bibles of his time. Although he was a devout Christian, Newton's work on the Bible was focused not on restoring the original Jewish and Christian texts but on rediscovering the one true religion that existed prior to the Flood of Noah, when science and spirituality were one. The author shows that a single thread runs through Newton's metaphysical explorations: He is attempting to chart the descent of man's soul from perfection to the present day. The author also examines Newton's alternate timeline of ancient history and his study of prophecy through the Book of Revelations, including his prediction of an Apocalypse in the year 2060 followed by a radically transformed world. He shows that Newton's great hope was that these writings would provide a moral compass for humanity as it embarked upon the great enterprise that became our technological world.

Stories do not actually exist in the (fictional or factual) world but are constituted, structured and endowed with meaning through the process of mediation, i.e. they are represented and transmitted through systems of verbal, visual or audio-visual signs. The terms usually proposed to describe aspects of mediation, especially perspective, point of view, and focalization, have yet to bring clarity to this field, which is of central importance, not only for narratology but also for literary and media studies. One crucial problem about mediation concerns the dimensions of its modeling effect, particularly the precise status and constellation of the mediating agents, i.e. author, narrator or presenter and characters. The question is how are the structure and the meaning of the story conditioned by these different positions in relation to the mediated happenings perceived from outside and/or inside the storyworld? In this volume, fourteen articles by international scholars from seven different countries

address these problems anew from various angles, reviewing the sub-categorization of mediation and re-specifying its dimensions both in literary texts and other media such as drama and theater, film, and computer games

All the world's a stage--literally so, given the ubiquitous presence of webcams recording daily life in cities. This footage, allegedly documentary, recreates cities as cinematic environments as people interact with the multitudes of cameras and screens around them. Paula Albuquerque's original research and experimental films, presented in this groundbreaking book, expose fictionalizing elements in archival webcams and explore video surveillance as an urban condition that influences both perceptions of the past and visions of the future.
