As the world around us becomes more fantastic, and science itself more surreal, the realms of science fiction and fantasy become correspondingly both more bizarre and more relevant.

Voices of Vision offers a rare look into the inner workings of this realm and into the very thoughts and methods of those who make it tick: editors and writers of science fiction and fantasy, and creators of comic books and graphic novels. In wide-ranging interviews that are by turns intimate and thought provoking, irreverent and outrageous, Jayme Lynn Blaschke talks shop with some of the most interesting voices in these genres as well as the people behind them, such as current Science Fiction Weekly and former Science Fiction Age editor Scott Edelman. ø A host of authors talk to Blaschke about what it's like to do what they do, how they work and how they started, and where they think the genre is headed. Blaschke talks to writers such as Robin Hobb, Charles de Lint, Patricia Anthony, and Elizabeth Moon; revered authors of comic books and graphic novels, including Neil Gaiman and Brad Meltzer; and icons such as Samuel R. Delany, Gene Wolfe, Harlan Ellison, and Jack Williamson. Editors such as Gardner Dozois, editor of Asimov's Science Fiction magazine, discuss their publishing philosophies and strategies, the origins and probable directions of their magazines, and the broader influence of such ventures. For devoted reader, aspiring writer, and curious onlooker alike, these interviews open a largely hidden, endlessly engrossing world.

From Iron Fist to Invisible Hand uses telecommunications policy as a window to examine major contradictions in China's growth as an economic and political superpower. While China policy analysts wonder why the government occasionally restrains growth and raises prices, technologists marvel at how the telecommunications industry continues to grow enormously despite constraints and unpredictability in the market. Frustration is pervasive in the business environment, where regulations are constantly changing. This book provides six policy-focused case studies, each centered on a question with implications for telecom stakeholders, such as: Who is the regulator? Who are the regulated? Which foreigners can enter China, thereby regulating wholesale prices, setting consumer prices, and introducing Internet and innovative technologies? These cases explain the government's liberal and conservative approach toward reform, the policies that both promote and constrain business, and the major hurdles that lie ahead in telecommunications reform.
