Workspaces and their design have a vast impact on the comfort and productivity of employees. Therefore, the structure of a workspace can be used to determine the socio-economic characteristics and elements that will appear in the employees that utilize them. Co-Manufacturing and New Economic Paradigms provides innovative insights into shared workspaces as independent socio-economic environments. The content within this publication explores the ideas of knowledge sharing, work culture, and economic planning. It is a vital reference source for entrepreneurs, business professionals, and researchers, and it covers topics centered on the importance of workspace design and organization. The Winter 2012 (vol. 14 no. 3) issue of the Nexus Network Journal features seven original papers dedicated to the theme "Digital Fabrication". Digital fabrication is changing architecture in fundamental ways in every phase, from concept to artifact. Projects growing out of research in digital fabrication are dependent on software that is entirely surface-oriented in its underlying mathematics. Decisions made during design, prototyping, fabrication and assembly rely on codes, scripts, parameters, operating systems and software, creating the need for teams with multidisciplinary expertise and different skills, from IT to architecture, design, material engineering, and mathematics, among others The papers grew out of a Lisbon symposium hosted by the ISCTE-Instituto Universitario de Lisboa entitled "Digital Fabrication – A State of the Art". The issue is completed with four other research papers which address different

mathematical instruments applied to architecture, including geometric tracing systems, proportional systems, descriptive geometry and correspondence analysis. The issue concludes with a book review.
