Recent upheaval in the global energy system – dramatic increases in demand led largely by developing countries, significant decreases in supply as a result of local or regional conflicts, and the growing nexus between the burning of hydrocarbons and climate change – has unsettled long-held notions of energy security. For many years, transatlantic cooperation helped undergird the system's stability, but Europe and North America have drifted apart in several key ways, potentially undermining the search for energy sufficiency, surety, and sustainability. Will the transatlantic partners continue on separate paths in the face of dramatic change in the global energy system, or does the breadth and depth of the challenges they confront compel them to work more closely together? In this edited volume, experts from across Europe and North America – including advisors to the executive and legislative branches of both the EU and the

United States, to senior military commanders, and to major international organizations and companies – examine the most salient facets of the transatlantic energy relationship and discern whether that relationship is characterized by growing convergence or divergence. This book was based on a special issue of the Journal of Transatlantic Studies.

The study of globalization has captured the attention of scholars from nearly every field. The potential impact on the social system and cultural values of a more interdependent world is an important aspect of this attention. This thesis considers the possible effects of globalization in encouraging the development of a system of similar values and beliefs. Specifically, the evidence of convergence and divergence in values relating to economics family, politics and morality is explored using the 1981 and 1990 World Values Surveys and include an analysis of data from twenty different nations exhibiting varying degrees of economic and political development. The author finds that many values did not change significantly from 1981 to 1990. This illustrates the stability of values. However, there is some evidence of convergence in marriage and family values, but of divergence in political and moral-based beliefs. Additionally the results suggest some economic values may be becoming more similar, while others remain quite distinct. Further, important differences exist in the results of the individual and aggregate-level analyzes, suggesting that national identities may have an impact on global value change. Finally, the implications for future international relationships,

public policy, and future research questions are discussed.

The rhetoric of the 2016 US election campaign and the evidence of President Donald Trump's first year in office both point to the reality that, in the short term at least, European policymakers will need to take into consideration an uncertain, populist and conflictual US government that is focused on its narrow definition of America's national interests to the exclusion of those of its long-standing allies. Over the past year, Trump has taken multiple policy positions that are antithetical to those of most European powers. He has signalled the withdrawal of the US from the Paris Agreement, questioned the viability of NATO, disavowed the Iran nuclear deal, and, most recently, recognized Jerusalem as Israel's capital. In Europe, meanwhile, significant attention and political energy has been taken up with maintaining the credibility and coherence of the EU while managing the intended exit of the UK. This risks diverting focus and capacity away from common global concerns. Compounding this has been the rise of populism and nationalism in many states, which has increasingly challenged the supranational and internationalist ethos of the EU, and has restricted the scope for political leaders to act in accordance with its long-held principles. In this environment of significant political uncertainty on both sides of the Atlantic, is the relationship between the US and its European allies at risk of long-term divergence, or do recent areas of apparent policy difference reflect more cyclical trends that can be ridden out? This report - the culmination of a three-year research project by the US and the Americas

Programme at Chatham House - explores the long-standing and fundamental drivers of US and European policymaking, and sets out recommendations to address the key structural factors that threaten the durability of transatlantic relations. Drawing on insights from a series of scenario workshops and case studies, the report examines the major influencing factors in recent US and European foreign policy decision-making. Of these, three sets of critical factors - demographics, access to food and energy resources, and the integrity of international institutions - are identified as structural and, in that they affect the transatlantic partners differently, as likely to lead to long-term divergence if not managed carefully. A number of additional factors could cause divisions between the US and Europe - such as economics, differing capabilities (particularly military capabilities), leadership personalities and political polarization. However, while these factors may cause real and meaningful shorter-term disruptions, they are more transient in nature and thus pose less of a long-term threat to the transatlantic relationship. During the current period of political uncertainty and flux, progress on specific transatlantic goals (from free trade to environmental protection) may halt or even go into reverse, particularly if they are dependent on senior government leadership. In some cases, there may still be room for manoeuvre through traditional bureaucratic channels. In others, however, transatlantic coordination will best be led by other interests, be they cities, regional state leaders or non-state actors. The report makes the case that while the transatlantic relationship may currently be

traversing a period of divergence, this need not lead to a structural split over the longer term. Notwithstanding the present choppy waters, the fundamentals in relations between the US and Europe remain strong, and the prospects are mostly positive. It will be important, however, that leaders on both sides of the Atlantic maintain their focus on the structural drivers of potential convergence and divergence, and take steps to mitigate the risks of long-term divisions - chief among them: Valuing transatlantic cooperation as a goal in and of itself. Supporting transatlantic immigration. Reinforcing transatlantic energy flows. Rebuilding and strengthening institutions and norms. Better assessing - and balancing - US and European capabilities. Conducting joint analysis. Promoting transatlantic bridges between non-state actors. Engaging more often in transatlantic public debate.

The Oxford Handbook of Social Influence restores this important field to its once preeminent position within social psychology. Editors Harkins, Williams, and Burger lead a team of leading scholars as they explore a variety of topics within social influence, seamlessly incorporating a range of analyses (including intrapersonal, interpersonal, and intragroup), and examine critical theories and the role of social influence in applied settings today.

convergence in an enlarged EU and closer cooperation between regional and monetary policymakers and researchers.' - John Bachtler, Journal of Regional Science This highly topical book addresses the challenge of economic convergence within Europe, beginning with a thorough review of the theory of growth and related empirical research. Historical and more recent economic developments within the present EU and current accession countries are discussed, along with the design for the process of further integration of accession countries into the EU and the Euro area. Moreover, the potential to achieve a sustainable catch-up process in Western Balkan countries, the Ukraine and Russia is explored, focusing on the task facing the EU in designing proper policies vis-à-vis these countries. the contributors' varied perspectives ensure that the theories and policies postulated are linked closely with the actual situation in accession countries and offer up-to-date insights.

From 1820 to 1990 the share of world income going to today's wealthy nations soared from 20% to 70%. That share has recently plummeted. Richard Baldwin shows how the combination of high tech with low wages propelled industrialization in developing nations, deindustrialization in developed nations, and a commodity supercycle that is petering out.

Corporate Governance In A Globalising World: Convergence Or Divergence? presents a broad and multi-disciplinary debate on corporate governance systems by integrating academic viewpoints, statistical evidence, as well as field surveys. Based on a large

number of publications and studies, the opinions of researchers are grouped into three categories: those that believe in a convergence into the direction of the market-oriented model (with the Anglo-American model as the reference base), those that opt for another type of convergence, namely in the direction of a hybrid corporate governance model (based on cross-reference between different leading governance models), and those that do not believe in global convergence but adhere to diversity of governance models.

Considers global, national, and regional (subnational) patterns of economic growth from a comparative perspective in 16 papers from a June 1997 conference in Cagliari, Italy. They include discussions of the economic rise and decline of nations; research and development, technology, and economic growth; how much convergence has taken place in the inequality in regional and state per-capita incomes in the US; whether allocation matters in human capital and growth in the European regions; growth and sectoral dynamics in the Italian regions; and regional integration and public investment in Spain. The Handbook brings together an assembly of comprehensive and high quality chapters to enable understanding of changes in employment relations since the early 1970s. Theoretically-based chapters attempt to link varieties of capitalism, business systems, and different modes of regulation to the specific practice of employment relations, and offer a truly comparative treatment of the subject, providing frameworks

and empirical evidence for understanding trends in employment relations in different parts of the world.

This book is concerned with the question of inequality - which points to a major structural problem in intra-national and inter-national respect. It covers the tension between the rich and poor in less developed countries as well as within richer countries in the process of globalisation. The main topics are the scope of disparities between the rich and poor, people's perception of wealth and poverty, and the concomitants of inequality which shape this relationship and influence its socio-economic consequences. In the tradition of social reporting, the book brings together authors from 15 countries, documenting a broad range of the international inequality debate. The results are related to the trends of socio-economic development, to statistical problems of measuring inequality, and to socio-political problems of integrating society in the facing the challenge of dividing forces. The book is of interest for everybody who wants to understand the tensions of modern world.

This book analyses EU regional policy and its co-ordination with other European and national public policies, namely investment grants, research and development policy and transport policy. The analysis identifies shortcomings within EU regional policy as well as co-ordination, problems with other public policies.

Media Convergence, language: English, comment: Das Finnische Notensystem geht von 5-1, wobei 5 die beste Note ist und 1 noch genügend ist dh eine 5 entspricht einer Schweizerischen 6 bzw. einer Deutschen 1., abstract: It is not possible to avoid the two words convergence divergence in literature, discussions and theories about new media, new services, what the audience wants and the future of media nowadays as convergence rapidly became one of the key concepts in new media discourse."(Storsul/Stuedahl:2007:9) So it was mentioned in articles, academic texts, policy documents and industrial papers and was introduced as the new order. (Fagerjord/Storsul:2007:19) And in becoming a key concept convergence also became an important rhetorical tool that encouraged change in several fields e.g. grassroots journalism sites or media companies presenting new (future) plans for online platforms and mobile services. (Storsul/Stuedahl:2007:9) But even if the two words are omnipresent it seems as if not everybody is writing, meaning and talking about the same. Actually sometime when reading different articles and books it seems as the authors were writing and discussing totally different topics. Like Storsul and Stuedahl describe it, convergence really is a buzzword.(Storsul/Stuedahl:2007:9) And it is not only a buzzword, but it bears the old human (science-fiction) visions and hopes of media enabling things being managed by one central system and/or device that organizes our whole life and we now can't even think of. (Storsul/Stuedahl:2007:10) One very common though simple example of such futuristic thinking and visions might be

the refrigerator that automatically and independently orders the needed food and drinks from the shop and they are also delivered automatically, maybe even beamed into the refrigerator."

This book compares and contrasts publicly espoused security concepts in the Nordic region, and explores the notion of societal security. Outside observers often assume that Nordic countries take similar approaches to the security and safety of their citizens. This book challenges that assumption and traces the evolution of 'societal security', and its broadly equivalent concepts, in Sweden, Norway, Denmark and Finland. The notion of societal security is deconstructed and analysed in terms of its different meanings and implications for each country, through both country- and issue-focused studies. Each chapter traces the evolution of key security concepts and related practices, allowing for a comparison of similarities and differences between these four countries. Using discourses and practices as evidence, this is the first book to explore how different Nordic nations have conceptualised domestic security over time. The findings will be valuable to scholars from across the geographical and theoretical spectrum, while highlighting how Nordic security discourses and practices may deviate from traditional assumptions about Nordic values. This book will be of much interest to students of security studies, Nordic politics and International Relations.

This book deals with the consequences of converging and diverging processes and their development in language contact situations. It provides insights into the various forms of language contact and the conditions under which bilingual speakers master their every-day life in bilingual communities. Its nine contributions cover both theoretical and typological aspects, such as the classification of languages, the role of language contact, linguistic complexity and

spontaneous speech innovations, and convergence and divergence processes in translation, (morpho)syntax and phonology/phonetics. Taken together, these studies provide challenges for linguistic theories that generalize from situations of monolingualism suggesting instead that a sound linguistic theory cannot be a theory for just one single, isolated language but must be a theory for at least two languages. It must also account for the fact that some structures involved in contact situations are not kept apart but develop in such a way that the distance decreases between the languages involved.

This edited book focuses on the dynamic balance between global cultural diversity and multilateral convergence in relevant policy areas that involve actual and potential policy convergences (and divergences): the environment, trade, peace and security, and human rights. It offers theoretical reflections about the impact of the concept of multiple modernities on new ideas, cultural backgrounds, and/or national or regional particularities. An interdisciplinary team of authors combines comparative policy analysis with theoretical dialogue about the conceptual, institutional, normative, and political dimensions of a new kind of multilateral cooperation. Finally, the book concludes that by stimulating an intercultural dialogue which goes beyond a mere "rational choice" approach, we can foster progress through a better understanding of the opportunities and limitations offered by a pluralist, varied, post-hegemonic, and multilayered form of multilateral cooperation. This book will be of key interest to scholars and students of European/EU studies, economics, human rights, climate change, history, cultural studies, international relations, international political economy, security studies, and international law.

examines the extent to which the European Union has brought about and should bring about convergence of law in Europe. Rather than focusing narrowly on the Intergovernmental Conference process, the book engages those who wish a detached and, at times, theoretical examination of the politics of institutional reform in the EU; of the legal techniques for accommodating diversity within the Union and the process of treaty making or constitution building in the EU; the cross-fertilization of administrative law concepts between the EU level and the national level; the need for and legitimacy of a European Union competence on human rights; and whether private law and public law differ in the extent to which they reflect national culture and therefore in the extent to which they are amenable to convergence.

Bachelor Thesis from the year 2017 in the subject Business economics - Business Management, Corporate Governance, grade: 1,3, University of Mannheim, language: English, abstract: Although cultural and contextual settings vary across the world, there is of course one level at which HRM is clearly universal: all companies have to manage and hence to utilize Human Resources. A few questions might arise when exploring the convergence-divergence issue in HRM. How to define HRM and which particular HRM areas and practices should be analyzed for making hypotheses about the absence or presence of convergence? Which time horizon should one apply and how HRM convergence-divergence to be conceptualized? Can we find sufficient evidence for determining whether there are common trends of HRM becoming more similar or contrary more dissimilar over time and across nations? Are US derived HRM practices universally applicable to, for example, the European context? What are the specific HRM areas where researchers can identify developments towards convergence or divergence? This bachelor thesis addresses the above mentioned questions in order to provide

an overview about the most important issues in the convergence-divergence debate. The focus of this study is not to identify a winning side but instead to present some of the main concepts and best-available evidence for each perspective. Thus, this study aims at enhancing the readers understanding about relevant controversial subjects in the convergence-divergence discussion.

In *One World Emerging?* Alex Inkeles clarifies the meaning of convergence in the social organization of modern societies, shows how it can be measured, and illustrates in detail the manner and degree of convergence across national boundaries. Inkeles assesses the extent to which convergence in institutional patterns is reflected in the emergence of more common attitudes, values, and daily behaviors in different national populations as individuals and communities engage with and respond to the standardizing pressures of national development and global modernization. One popular image of the probable condition of humanity in the twenty-first century anticipates a new Armageddon with all the great civilizations at war with each other. This model neglects a less dramatic but deeper-seated process of worldwide change in which national economic and political systems become more alike and populations worldwide come to adopt similar lifestyles and develop similar attitudes and values for daily living. Alex Inkeles penetrating analysis focuses on this process of convergence. In *One World Emerging?* Inkeles clarifies the meaning of convergence in the social organization of modern societies, shows how it can be measured, and illustrates in detail the manner and degree of convergence across national boundaries. Sensitive to evidence counter to the main trend, he gives close attention to the many instances in which national differences persist and nations and their populations diverge from a common path. At the national level, he compares and

contrasts the modernization of the United States, Russia, China, and India. Focusing on particularly important institutions, he reviews the process of convergence in prestige hierarchies, the family, education, and communications. Capping the enterprise, Inkeles assesses the extent to which convergence in institutional patterns is reflected in the emergence of more common attitudes, values, and daily behaviors in different national populations as individuals and communities in North America, Europe, and increasingly in Asia engage with and respond to the standardizing pressures of national development and global modernization.

Comparing the experience of East Asia and Latin America since the mid-1970s, Elson identifies the key internal factors common to each region which have allowed East Asia to take advantage of the trade, financial, and technological impact of a more globalized economy to support its development, while Latin America has not.

There are many different types of convergence within economics, as well as several methods to analyse each of them. This book addresses the concept of real economic convergence or the gradual levelling-off of GDP (gross domestic product) per capita rates across economies. In addition to a detailed, holistic overview of the history and theory, the authors include a description of two modern methods of assessing the occurrence and rate of convergence, BMA-based and HMM-based, as well as the results of the empirical analysis. Readers will have access not only to the conventional econometric approach of ?

Where To Download Convergence And Divergence Developing A Semiglobal

convergence but also to an alternative one, allowing for the convergence issue to be expressed in the context of automatic pattern recognition. This approach is universal as it can be adapted to a variety of input data. The lowest aggregation level study investigates regional convergence through the case of Polish voivodships, where convergence towards the leader is tested. On a higher level of aggregation, the authors examine the existence of GDP convergence in such groups as the EU28, North Africa and the Middle East, sub-Saharan Africa, South America, Caribbean, South-East Asia, Australia and Oceania, or post-socialist countries. For each group, the real ? convergence is tested using the two above-mentioned approaches. The results are widely discussed, broadly illustrated, interpreted, and compared. The analysis allows readers to draw interesting conclusions about the causes of convergence or the drivers behind divergence. The book will stimulate further research in the field, but the research was conducted from the point of view of individual countries.

This new monograph provides a stimulating new take on hotly contested topics in world modernization and the globalizing economy. It begins by situating what is called the Great Divergence--the social/technological revolution that led

European nations to outpace the early dominance of Asia--in historical context over centuries. This is contrasted with an equally powerful Great Convergence, the recent economic and technological expansion taking place in Third World nations and characterized by narrowing inequity among nations. They are seen here as two phases of an inevitable global process, centuries in the making, with the potential for both positive and negative results. This sophisticated presentation examines: Why the developing world is growing more rapidly than the developed world. How this development began occurring under the Western world's radar. How former colonies of major powers grew to drive the world's economy. Why so many Western economists have been slow to recognize the Great Convergence. The increasing risk of geopolitical instability. Why the world is likely to find itself without an absolute leader after the end of the American hegemony A work of rare scope, Great Divergence and Great Convergence gives sociologists, global economists, demographers, and global historians a deeper understanding of the broader movement of social and economic history, combined with a long view of history as it is currently being made; it also offers some thrilling forecasts for global development in the forthcoming decades. The fundamental contrast between convergent and divergent tendencies in the development of Balkan cultural identity can be seen as an important

determinative both in the contradictory self-images of people in the Balkans and in the often biased perceptions of Balkan societies held by external observers, past and present. In bringing together case studies from such heterogeneous lines of research as linguistics, anthropology, political, literary and cultural history, each presenting insightful analyses of micro- as well as macro-level aspects of identity construction in the Balkans, this collection of essays provides a forum for the elucidation and critical evaluation of an intriguing paradox which continues to characterize the cultural situation in the Balkans and which, moreover, is of undeniable relevance for our understanding of recent political developments. As such, it also provides a window into the actual state of scholarly interest in the rich interdisciplinary field of Balkan studies. This book contains a selection of papers presented at the international conference «Developing Cultural Identity in the Balkans: Convergence vs. Divergence», organized by the Center for Southeast European Studies at Ghent University on 12 and 13 December 2003 in Ghent.

Against the background of the introduction of the Euro in 1999, France, Germany and Italy have recently experienced higher divergence in terms of GDP growth. Based on a set of original papers produced by a team of economists from the three main National Central Banks of the Euro area this book analyses the latest

developments in three important European economies in a broad perspective, using modern econometric techniques.

"Developing countries may be better served by "north-south" than by "south-south" free trade agreements. Free trade agreements between low-income countries tend to lead to divergence in member country incomes, while agreements between high-income countries tend to lead to convergence"--Cover. This volume contains the written versions of presentations given at the international conference "Convergence and Divergence of Family Law in Europe", organised in Amsterdam in September 2006. The main objective of this conference was to instigate an in-depth discussion regarding various facets of the convergence/divergence discord. Another objective was to give scholars the opportunity to present their respective views in the ongoing debate surrounding convergence, divergence and deliberate harmonisation activities in the field of family law. In the first part of this book the historical and theoretical issues of the convergence/divergence debate and the controversy surrounding the "cultural constraints" argument are discussed. The second part gives a picture of the contemporary role of convergence/divergence tendencies on a regional level in various parts of Europe. It starts with an overview of the recent trends in the renowned "Nordic co-operation" in the approximation of family laws, which is

generally considered to be the most successful example of regional harmonisation of family laws in Europe. The next article deals with convergence/divergence tendencies in the development of the family law of the Spanish autonomous communities. The following two contributions offer a summary of the convergence and divergence trends in Eastern Europe against the background of such sweeping events as the fall of the Soviet Union, the disintegration of the Eastern block and the accession of a majority of the Central European countries to the EU. The third part of this volume deals with the convergence and divergence tendencies in the following particular fields of family law: marriage, divorce, same-sex relationships, establishment of parenthood and matrimonial property law.

Price divergence is readily apparent to anyone who shops. Travelers from Manchester to London, or from Chicago to Paris, are hit by sticker shock. Products ranging from London Fog raincoats to Viagra are available over the Internet at half their retail store prices. Common experience tells us that prices for identical products differ between countries, between cities, even between neighboring shops. On the other hand, common experience also tells us that open markets and greater competition will force a degree of price convergence, if not identical prices. This monograph presents speculative calculations that illustrate potential benefits from price convergence between countries. The authors take a fresh look at global economic integration by examining existing price divergence, and possible price convergence, across a

range of consumer goods and then calculate the potential benefits of price convergence on a country-by-country basis and for the world as a whole. This study examines the potential benefits from price convergence resulting from more competition and market integration, not perfect competition and market integration. The authors calculate these benefits assuming that the world economy can attain the same degree of competition and market integration--and hence price convergence--as exists within the United States.

The development of a nation can be influenced by a wide range of factors. In the modern era of globalization, under-developed countries must strive to catch up to developed nations and establish themselves in the global market. The Handbook of Research on Global Indicators of Economic and Political Convergence is a pivotal reference source for the latest scholarly research on social, political, and environmental variables that affect the ability of developing countries to reach an equal standing in the global economy. Highlighting theoretical foundations, critical analyses, and real-world perspectives, this book is ideally designed for researchers, analysts, professionals, and upper-level students interested in emerging convergence and divergence trends in modern countries.

Increasing concerns regarding the world's natural resources and sustainability continue to be a major issue for global development. As a result several political initiatives and strategies for green or resource-efficient growth both on national and international levels have been proposed. A core element of these initiatives is the promotion of an increase of resource or material productivity. This dissertation examines material productivity developments in the OECD and BRICS countries between 1980 and 2008. By applying the concept of convergence stemming from economic growth theory to material productivity the analysis provides insights

into both aspects: material productivity developments in general as well potentials for accelerated improvements in material productivity which consequently may allow a reduction of material use globally. The results of the convergence analysis underline the importance of policy-making with regard to technology and innovation policy enabling the production of resource-efficient products and services as well as technology transfer and diffusion.

This updated and enhanced seventh edition of ESSENTIALS OF METEOROLOGY is written by the most widely read and authoritative author in introductory meteorology—Donald Ahrens. Ahrens's ability to explain relatively complicated ideas in a student-friendly, manageable fashion allows even non-science students to visualize the principles of meteorology. The text's clear and inviting narrative is supplemented by numerous pedagogical features that encourage observing, calculating, and synthesizing information. New critical thinking questions linked to key figures and concept animation boxes pointing to online animations and appendices help students to immediately apply the text material to the world around them—and understand the underlying meteorological principles.
