This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

Another true-life travel adventure from the Balding Backpacker; one of the epic tales of modern motoring history. In the late summer of 2003, middle-aged adventurer Richard Meredith and a young student companion borrowed a small family hatchback from General Motors and drove it halfway round the world. GM were hoping to publicise the bankrupt Daewoo car business they bought in South Korea after founder Kim Woo Choong had disappeared with \$2billion of company cash. But they got more than they bargained for - and so did the intrepid duo, defying sandstorms, rioters and gun-toting rebels as they meandered across Europe, battled through the ranks of Taliban and al-Qaeda forces in Afghanistan, and juddered across India into Laos and Vietnam. Contains 16pages of colour photos. -- more at www.mercurybooks.co.uk

'Persuasive and hearting . . . essential reading. A valuable contribution to our thinking about the life of the mind' Daily Telegraph Why is modern medicine wrong about depression? What lies beyond its surface symptoms? How do we deal with the experience of loss? In *The New Black*, Darian Leader argues that mourning an melancholia lie at the heart of what we call depression, but that we neither fully understand nor appreciate the influence of either on our inner lives. By looking more deeply at how we respond to experiences of loss, he seeks to free us from the grip of feelings that, if we let them, may destroy us. 'Leader's analysis of the work of mourning is exemplary. A fine writer who can untangle the complexities of the great psychoanalytic thinkers. *The New Black* is a book that might actually help' Independent 'An important and timely investigation into contemporary ideas about depression, the mourning process and loss' London Review of Books 'Provocative and controversial . . . a fascinating view of a global issue that may provide new answers to those who have loved and lost' Daily Record 'Rigorous and engaging . . . audacious, rich, cogently argued' Irish Times Hatchback & Coupe, inc. special/limited editions. Does NOT cover features specific to Cabriolet or Sensonic clutchless transmission. Petrol: 2.0 litre (1985cc) & 2.3 litre (2290cc) 4-cyl, inc. Turbo. Does NOT cover 2.5 litre V6.

Finally, there's a one-stop, problem-solving guide for every professional involved in electrical construction projects. *Industrial Electrical Wiring* eschews the theoretical discussions common to other texts on the market and instead focuses on such real-world issues as codes, standards, and print reading, as well as the design and implementation of actual installations. Every major element in the field is addressed in hard, practical terms--from overcurrent protection to low-voltage terminations, electrical calculations to wiring methods, equipment fasteners to electric motors.

This edition of Swokowski's text is truly as its name implies: a classic. Groundbreaking in every way when first published, this book is a simple, straightforward, direct calculus text. Its popularity is directly due to its broad use of applications, the easy-to-understand writing style, and the wealth of examples and exercises which reinforce conceptualization of the subject matter. The author wrote this text with three objectives in mind. The first was to make the book more student-oriented by expanding discussions and providing more examples and figures to help clarify concepts. To further aid students, guidelines for solving problems were added in many sections of the text. The second objective was to stress the usefulness of calculus by means of modern applications of derivatives and integrals. The third objective, to make the text as accurate and error-free as possible, was accomplished by a careful examination of the exposition, combined with a thorough checking of each example and exercise.
