Le regard que jette Elliot Erwitt sur New York est parfois cru, parfois élégant, mais toujours réaliste. Ses hommages monochromes à la Big Apple saisissent toutes les nuances de cette métropole dynamique. L'œil du photographe a capturé la véritable diversité de cette ville unique dans cette sélection de photos prises tout au long de la carrière d'Erwitt, dont certaines photos inédites datant des années 1950 et 1960.

Dans cet hommage sincère et original au meilleur ami de l'homme, Elliot Erwitt capture toute la diversité du royaume canin. Nous sommes les témoins privilégiés des humeurs de chiens, galopin enjoué et dynamique au compagnon tranquille et constant. Des petits chiens audaces et espiègles aux bêtes massives et douces, les images d'Erwitt dévoilent le côté unique de ces créatures qui nous sont si chères, tout en combinant un sens sûr de la composition à la magie du moment.

This book gathers a vast body of recent works by Marc Quinn, including those made for the exhibition *Myth* in the evocative spaces of Juliet's House in Verona. Alongside the artist's more celebrated works, such as the Flower Paintings, numerous new works will be on view, including the landmark *Siren*, made from solid gold. Inspired by graffiti left over time on the walls of the courtyard of Juliet's house, Quinn has also created the Love Paintings.

During the 1980s the Marshallian concept of industrial district (ID) became widely popular due to the resurgence of interest in the reasons that make the agglomeration of specialised industries a territorial phenomenon worth being analysed. The analysis of clusters and IDs has often been limited, considering only the local dimension of the created business networks. The external links of these systems have been systematically under-evaluated. This book offers a deep insight into the evolution of these systems and the internal-external mechanism of knowledge circulation and learning. This means that the access to external knowledge (information or R&D cooperative research) or to productive networks (global supply chains) is studied in order to describe how external knowledge is absorbed and how local clusters or districts become global systems. It provides a unified approach; showing that existing capabilities expand when locally embedded knowledge is combined with accessible external knowledge. In this view, external knowledge linkages reduce the danger of cognitive 'lock-in' and 'over-embeddedness', which may become important obstacles to local learning and innovation when technological trajectories and global economic conditions change. The kilns at Morgantina, site of the well-known excavations in central Sicily, are an outstanding example of multiple potters' workshops in use during the late Hellenistic period. In fully documenting these ten kilns, excavated between 1955 and 1963, Ninina Cuomo di Caprio offers both a representative cross-section of the physical setting of ceramic production in this ancient Greek city and evidence for its daily industrial activity. She includes detailed plans and section drawings of

each kiln and formulates hypotheses on its operation in light of modern thermodynamics. The text, which is in Italian, is preceded by an English-language summary. Cuomo di Caprio's archaeological study of the kiln structures and their ceramic products is supplemented by such diagnostic tools as thermoluminescence analysis, neutron activation analysis, X-ray diffraction, and optical examination by polarizing microscope. Opening an entirely new window into the everyday working practices of the Morgantina potters, this study demonstrates that they operated at a very sophisticated level: selecting and purifying specific clays, and adding certain materials to manipulate their working and firing characteristics.
