This edited book presents scientific results of the 14th IEEE/ACIS International Conference on Computer and Information Science (ICIS 2015) which was held on June 28 – July 1, 2015 in Las Vegas, USA. The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users, and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects (theory, applications and tools) of computer and information science, and to

discuss the practical challenges encountered along the way and the solutions adopted to solve them.

Small-x Behavior of Deep Inelastic Structure Functions in QCD covers the proceedings of the DESY topical meeting entitled ""Small-x Behavior of Deep Inelastic Structure Functions in QCD"", held in DESY, Hamburg, Germany on May 14-16, 1990. The book focuses on Quantum Chromo Dynamics (QCD) structure function technology, including structure function measurements, photon structure, multi-parton interactions, and hadronic collisions. The selection first offers information on structure function measurements at Hera and pomeron and odderon in QCD and a two-dimensional conformal field theory. Topics include nucleon structure function measurements, handles on the gluon distribution, and photon structure. The book also examines Regge poles in asymptotic free theories; QCD phenomenology of parton distribution functions at small x; and possible parametrization of parton distributions. The text elaborates on low x structure function and saturation of the parton density and photon diffractive dissociation in deep inelastic scattering. The publication also considers multi-parton interactions in high energy hadronic collisions and bound-state quark and gluon contributions to structure functions in QCD. Discussions focus on bound valence-quark distributions, intrinsic gluon distribution of protons, and intrinsic charm-quark distributions. The selection is a dependable reference for readers interested in small-x behavior of deep inelastic structure functions in QCD.

The 1985/86 apparition of Halley's Comet turned out to be the most important apparition of a comet ever. It provided a worldwide science community with a wealth of exciting new discoveries, the most remarkable of which was undoubtedly the first image of a cometary nucleus. Halley's Comet is the brightest periodic comet, and the most famous of the 750 known comets. With its 76-year period, its recent appearance was truly a "once-in-a-lifetime" observational opportunity. The 1985/86 apparition was the thirtieth consecutive recorded apparition. Five apparitions ago, the English astronomer Edmond Halley discovered the periodicity of "his" comet and correctly predicted its return in 1758, a triumph for science best appreciated in the context of contemporary views, or rather fears, about comets at that time. The increasingly rapid progress in technological development is very much apparent when one compares the dominant tools for cometary research during Halley's next three apparitions: in 1835 studies were made based on drawings ofthe comet; in 1910 photographic plates were used; while in March 1986 an armada of six spacecraft from four space agencies approached the comet and carried out in situ measurements, 1 AU from the Earth. In 1910, nobody could have dreamed that this was possible, and today it is equally difficult to anticipate what scientists will be able to achieve in 2061.

Medical education and the tools used for assessment are continually evolving. Single Best Answer (SBA) questions are a relatively new method of assessment commonly encountered in final surgical exams. The key to success in any SBA-style examination is practice, practice and more practice. With nearly 300 structured questions, this book comprehensively covers the surgical curriculum. Each specialty-specific chapter contains a combination of clinical vignettes and knowledge-based questions of varying degrees of difficulty, both challenging the more able candidates as well as giving a realistic appreciation of the standard required to pass. Each question gives a detailed explanation of the correct answer to aid reflection and reinforce understanding. This book is the ideal revision aid for all undergraduate medical students preparing for their final examination in surgery. In addition, doctors studying for the Membership of the Royal College of Surgeons (MRCS) and the Professional and Linguistic Assessment Board (PLAB) examinations will also find this book extremely useful.

From reviews of the previous edition: 'Provides a wealth of information ... graphically illustrates the need for practitioners to be thoroughly knowledgeable.' Toni Belfield, Director of Information, Family Planning Association. The world's population is increasing dramatically. At levels over 7 billion, rising annually by over 83 million (with births outstripping deaths by a factor of c. 2.4) the toll this imbalance takes on the environment, developing economies and resources (healthcare, education, rates of poverty) and the lives of women in the poorer parts of the world is increasingly unsustainable. Even in the developed world there is still an unacceptably high rate of unplanned pregnancies, demonstrating that appropriate education at both local and global levels about the full range of available contraception is essential. Using a highly accessible question-and-answer format, John Guillebaud and Anne MacGregor seek to ensure everything needed for good family planning practice is here in this book.
