Training Trances is about how to therapeutically communicate with the unconscious mind. The authors present their own unique integration of Ericksonian techniques, traditional models of hypnotherapy, and recent research in related areas. Numerous new patterns modeled from the work of Milton H. Erickson, M.D. are clearly explained and demonstrated. The use of trance in training design, to unconsciously install the skills being taught to the participants, is also covered. The book developed from transcripts of a four day workshop, and the design of the book parallels the design chosen for the training itself. Individual exercises or those done in groups of two or three are offered so that the reader may practice the techniques and learn the skills. There are numerous "live" demonstrations, inductions, and double inductions which create for the reader a real "feel" of how hypnosis is done and which are also a rich source for linguistic analysis for the advanced reader. Written with insight and humor, this book's most unique twist is its use of multi-level communication and hypnotic language to create a "training trance" for the readers as they journey through the text. Some hypnotic references are obvious and explicit -- those which are not obvious will create enjoyable "ah-ha!" experiences for the reader as they are discovered.

Parenting and communication with children can seem so easy one moment and so challenging the next. Why is that? And why is your well-meant comment sometimes received completely differently than the way you intended it? How can you address your child's behaviour and affect change in a respectful efficient way? These and many other questions are addressed in this practical workbook by providing you insight into NLP (Neuro Linguistic Programming) communication techniques. NLP consists of models and methods to influence behaviour and change through the use of language and other types of communication. For example, the content of a message can be accurate, but if your message is not conveyed using the right style, your child may not respond the way you anticipated. The style of your message should be aligned with the situation and receiver. Authors Marianne Langemeijer and daughter Julia Sorensen selected 30 efficient NLP tools and provide useful examples on how these can be tailored towards communication with children. With over 40 excercises the workbook also provides a hands-on and practical way to experience the tools and their effects in real-life. Adopting and integrating the NLP tools into your daily communication supports the creation of harmony and mutual understanding when interacting with children. "Grant yourself the knowledge and the adventure to experience more freedom in your thinking, actions and communication style."

Artificial intelligence (AI) has grown in presence in asset management and has revolutionized the sector in many ways. It has improved portfolio management, trading, and risk management practices by increasing efficiency, accuracy, and compliance. In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms use AI to devise novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.
