A self-test resource for veterinary and animal science students that is also of interest to medical students interested in parasitology or zoonoses, this book provides a convenient, useful, and current source of information to anyone interested in learning, revising and assessing their knowledge in parasitology.

"Parasites are a major issue affecting animal and human health, welfare, and economic productivity. This book provides 555 questions to test your knowledge of animal and tropical parasitology, to help you study anywhere, with any amount of time. Key features: Covers the most important and the most neglected parasites in a concise manner. Questions address parasite biology, epidemiology, diagnostics and management, all in relation to animal health. Includes key zoonotic parasites and their impact on human health. Uses multiple choice questions, true or false statements, fill-in-the-blanks, and more, to enable independent learning and self-testing. Provides explanatory answers to aid further revision and study. A self-test resource for veterinary and animal science students that is also of interest to medical students interested in parasitology or zoonoses, this book provides a convenient, useful, and current source of information to anyone interested in learning, revising and assessing their knowledge in parasitology"--

This book contains the summaries of the "Innovation in Pharmacy: Advances and Perspectives" that took place in Salamanca (Spain) in September 2018. The early science of chemistry and microbiology were the source of most drugs until the revolution of genetic engineering in the mid 1970s. Then biotechnology made available novel protein agents such as interferons, blood factors and monoclonal antibodies that have changed the modern pharmacy. Over the past year, a new pharmacy of oligonucleotides has emerged from the science of gene expression such as RNA splicing and RNA interference. The ability to design therapeutic agents from genomic sequences will transform treatment for many diseases. The science that created this advance and its future promise will be discussed. Phillip Allen Sharp is an American geneticist and molecular biologist who co-discovered RNA splicing. He shared the 1993 Nobel Prize in Physiology or Medicine with Richard J. Roberts for "the discovery that genes in eukaryotes are not contiguous strings but contain introns, and that the splicing of messenger RNA to delete those introns can occur in different ways, yielding different proteins from the same DNA sequence. He works in Institute Professor Koch Institute for Integrative

Cancer Research, Massachusetts Institute of Technology (MIT), Cambridge, MA, US. Este libro recoge los resúmenes de la «Innovation in Pharmacy: Advances and Perspectives» que tuvo lugar en Salamanca (España) en septiembre de 2018. La ciencia primitiva de la química y la microbiología fue la fuente de la mayoría de las drogas hasta la revolución de la ingeniería genética a mediados de la década de 1970. Luego, la biotecnología puso a disposición agentes proteínicos novedosos como interferones, factores sanguíneos y anticuerpos monoclonales que han cambiado la farmacia moderna. Durante el año pasado, surgió una nueva farmacia de oligonucleótidos a partir de la ciencia de la expresión génica, como el empalme de ARN y la interferencia de ARN. La capacidad de diseñar agentes terapéuticos a partir de secuencias genómicas transformará el tratamiento de muchas enfermedades. La ciencia que creó este avance y su promesa futura será discutida. Phillip Allen Sharp es un genetista y biólogo molecular estadounidense que co-descubrió el empalme de ARN.

Compartió el Premio Nobel de 1993 en Fisiología o Medicina con Richard J. Roberts por "el descubrimiento de que los genes en eucariotas no son cadenas contiguas, sino que contienen intrones, y que el empalme del ARN mensajero para eliminar esos intrones puede ocurrir de diferentes maneras, produciendo diferentes proteínas de la misma secuencia de ADN. Trabaja en el Instituto Profesor Koch Institute for Integrative Cancer Research, Instituto Tecnológico de Massachusetts (MIT), Cambridge, MA, EE. UU.

The Parvoviridae have been of increasing interest to researchers in the past decade. Their small size and simple structure have made them amenable to detailed physiochemical analysis, and from this work relatively detailed information has resulted that has significantly increased our understanding of the biology of these viruses. It has become clear that the

Parvoviridae are of interest not only for their own sake, but also because their relative simplicity renders them useful probes in the study of the biology of host cells and of other DNA viruses with which they interact. The Dependovirus genus, for instance, contains the defective adeno-associated viruses (AAV), which require a coinfection with either an adenovirus or a herpesvirus for productive multiplication. Studies of AAV, therefore, necessarily impinge on our understanding of the control of macromolecular synthesis by the helper virus. Similarly AAV has been reported to inhibit the oncogenicity of both adenoviruses and herpesviruses and has been used as a probe of mechanism in these instances as well. Finally, AAV establishes latent infections in vivo and is the only mammalian DNA virus where a comparable model system has been established in cell culture. This system has allowed study of the mechanism of latent infection at the molecular level."

Specifically written for those preparing for examinations and practitioners in travel medicine, MCQs in Travel Medicine contains over 600 multiple choice questions with detailed explanations which both teach and challenge the reader. Questions are grouped by topic which is ideal for revision, enabling you to focus on specific areas including adventure travel, travellers' diarrhoea, malaria, sexually transmitted disease, and drugs used in travel medicine. The style and format of the questions mirror the format of the exam questions, and the book includes a self-test to aid revision. This easy-to-read comprehensive book is ideally suited for those in busy day-to-day practices and those preparing for examinations in travel medicine including the Certificate Exam of the International Society of Travel Medicine.

understanding of concepts in parasitism: relationships between parasites and hosts and between parasites and environment, the general epidemiological aspects of parasites that affect humans, the socioeconomic factors affecting the transmission of parasites, the life-cycle, infection, transmission, the diagnosis, treatment and preventive measures for specific parasites. All the chapters in this book are followed by the relevance of the described parasitic diseases in Kenya. This book will give the students a real picture of the significance of the parasitic diseases in their immediate environments. Each chapter is also followed by important review questions either in the form of essays, short questions and multiple choices to help the students test their understanding of the topics. It is highly believed that this text book will make a good reference for graduate and post graduate students taking courses in parasitology in the various degree programmes at the Universities. The book will serve as a useful resource for teachers of parasitology.

Completely revised by new authors, this Fifth Edition presents 100 patient cases designed specifically to prepare students for clinical vignettes on the USMLE Step 1. Each case proceeds from chief complaint through diagnostic workup and treatment and includes buzzwords in history taking, physical examination, laboratory tests, imaging, and pathology. This edition's cases give greater emphasis to pathogenesis, epidemiology, differential diagnosis, management, and complications and include radiologic images, photographs, tables, and algorithms. MCQ Tutor for Students of Microbiology provides a series of multiple choice questions with annotated answers, mainly in bacteriology but also including parasitology, virology, and immunology. This book focuses on clinical applications. Organized into four parts, this book begins with an overview of the pre-clinical aspects of microbiology and host defense mechanisms. This text then deals with microbial systematics as well as the detailed properties of the various microorganisms. Other parts cover the nature and manifestation of a wide spectrum of infective diseases. This book discusses as well the laboratory diagnosis, treatment, and prevention of infective diseases. The final part deals with other examples of other forms of multiple choice question. This book is intended to be suitable for medical students in the second and third undergraduate years as an aid to preparation for their third MB examination. Students of medical and laboratory sciences as well as candidates for diploma and college examinations will also find this book useful.

The ability to use language in more literate ways has always been a central outcome of education. Today, however, "being literate" requires more than functional literacy, the recognition of printed words as meaningful. It requires the knowledge of how to use language as a tool for analyzing, synthesizing, and integrating what is heard or read in order to arrive at new interpretations. Specialists in education, cognitive psychology, learning disabilities, communication sciences and disorders, and other fields have studied the language learning problems of school age children from their own perspectives. All have tended to emphasize either the oral language component or phonemic awareness. The major influence of phonemic awareness on learning to read and spell is well-researched, but it is not the only relevant focus for efforts in intervention and instruction. An issue is that applications are usually the products of a single discipline or profession, and few integrate an understanding of phonemic awareness with an understanding of the ways in which oral language comprehension and expression support reading, writing, and spelling. Thus, what we have learned about language remains disconnected from what we have learned about literacy; interrelationships between language and literacy are not appreciated; and educational services for students with language and learning disabilities are fragmented as a result. This unique book, a multidisciplinary

collaboration, bridges research, practice, and the development of new technologies. It offers the first comprehensive and integrated overview of the multiple factors involved in language learning from late preschool through post high school that must be considered if problems are to be effectively addressed. Practitioners, researchers, and students professionally concerned with these problems will find the book an invaluable resource.
