Primavera P6 is one of the project management super tools that can have high potential for improving project success. There are many project management software tools in the market today. Unfortunately, many people who know the software have no idea how to use it. It is important to understand basic concepts of project management using a software tool like Primavera P6 that enables users to plan, schedule and control a large number of projects in a single software platform. This book was developed to accomplish two purposes. First, to provide a practical guide to using Primavera P6 to schedule and manage projects. Second, to introduce the required knowledge and skills to aid professionals wishing to achieve PMI-Scheduling Professional certification in Planning & Scheduling and Oracle Certification in Primavera P6 Enterprise Project Portfolio Manager to do so with ease. Oracle Primavera P6 Project Management module is comprehensive, scalable, multiproject planning and control software, built on Oracle or Microsoft SQL databases for organization-wide project management. It consists of role-specific tools to satisfy each team member's needs, responsibilities, and skills.

The construction industry is significant in the development of the Malaysian economy towards its realization of achieving vision 2020 to attain the status of a fully developed nation. To implement construction project, a proper planning and scheduling is of vital importance in order for the project to be executed and run smoothly. The best schedule is not the schedule showing the project completed in the shortest time period, it is the schedule that meets the primary objectives of the total project. Those primary objectives are to create a quality project, completed on time, within budget, and in a safe work environment. Therefore, the focus of this research is to conduct an exploratory study on developing planning and scheduling in construction project. To achieve the aim of the study, the following objectives have been identified such as to study the concept of planning and scheduling in construction project, to study the construction sequence of work for multi storey building and to produce S-Curve by application of Microsoft Project software. Two multi storey building projects were selected and structured interviews were conducted to experience personally who really involved in the construction project such as Project Manager, Planner Engineer and Project Engineer. The study has been carried out using case study method in which two samples of construction schedules have been evaluated and analyzed in terms of how to develop the scheduling. From the study, it was found on how the project was planned, the sequence of work and linking relationships between activities for the whole project. By choosing the best schedule of the project, then a new schedule has been developed by using Microsoft Project 2003 until produce the S-Curve. In conclusion, no doubt that information from the
