During this period, in addition to the magazine program, Voice, Orwell continued to develop what would now be called an "open university"—broadcasts by distinguished speakers on texts set for Bombay and Calcutta university degrees. He enlisted such speakers as E.M. Forster, T.S. Eliot, and Joseph Needham, and the broadcasts were backed up by publications printed in India for university students. Some of Orwell's scripts, such as that for his "Imaginary Interview with Jonathan Swift," pose difficult textual problems and these are fully examined and annotated. Additionally, the script of Eileen Blair's broadcast for the series, "In Your Kitchen" has been included. Orwell still found time to write a number of reviews, contribute to Partisan Review, and write essays on Hardy, Henry Miller, and Yeats.

Scores of pastors and leaders testify: "THIS CHANGED MY LIFE AND MINISTRY." The author considers these critical questions: In the beginning, before God created Adam (mankind), what was His original purpose and plan for him? What could have happened in the Garden of Eden if Adam had not sinned and God's redemptive plan had not become necessary? We know that when God created Adam he received natural life, but how did God plan for Adam to receive Divine (uncreated life)? What is the difference between God's creating and begetting work? It is evident that God has given the Cross a central place in His redemptive working; what is the difference between the work of the Cross and the way of the Cross? Since God, in the fullness of time, will put on display His Divine masterpiece before all the universe, how can we fully cooperate with him if we do not understand His Ultimate Intention?

Fundamental elementary facts and theoretical tools for the interpretation and model development of solid-gas interactions are first presented in this work. Chemical, physical and electrochemical aspects are presented from a phenomenological, thermodynamic and kinetic point of view. The theoretical aspects of electrical properties on the surface of a solid are also covered to provide greater accessibility for those with a physico-chemical background. The second part is devoted to the development of devices for gas detection in a system approach. Methods for experimental investigations concerning solid-gas interactions are first described. Results are then presented in order to support the contribution made by large metallic elements to the electronic processes associated with solid-gas interactions.

Mr. Thundermug is the inventive, entertaining, and—against all odds—poignant story of an animal who acquires the ability to eloquently speak human language. Using his own beautiful, eerie lithograph illustrations, Cornelius Medvei places us in a vivid world that is both familiar and alien. It's a world in which Mr. Thundermug and his family take up occupancy in an abandoned apartment building. On the roof of that building, Mr. Thundermug gazes at the heavens and thinks deep thoughts while his wife picks bugs off him and eats them. Understandably, he's somewhat confused by his complex existence as a fluent member of human society who has the essential nature of a more ancient species, but he assimilates as best he can. His worlds inevitably collide, and he is eventually brought to court for a petty crime and asked to defend himself in impossible ways. Simultaneously playful and foreboding, Mr. Thundermug announces the arrival of a bold and imaginative talent.

This edited open access book gives a comprehensive overview of small and lightweight electric three- and four-wheel vehicles with an international scope. The present status of small electric vehicle (SEV) technologies, the market situation and main hindering factors for market success as well as options to attain a higher market share including new mobility concepts are highlighted. An increased usage of SEVs can have different impacts which are highlighted in the book in regard to sustainable transport, congestion, electric grid and transport-related potentials. To underline the effects these vehicles can have in urban areas or rural areas, several case studies are presented covering outcomes of pilot projects and studies in Europe. A study of the operation and usage in the Global South extends the scope to a global scale. Furthermore, several concept studies and vehicle concepts on the market give a more detailed overview and show the deployment in different applications.
